✂ : In this talk, we will discuss four problems on special functions and the general program of special functions on time scales. The four problems are: (i) generalize Bessel functions to time scales, (ii) solve the time scales shifting problem, (iii) oscillation of hypergeometric functions with time-varying parameters, and (iv) lower bound estimates for matrix-valued hypergeometric functions. This work is supported by National Science Foundation grant #2532829.
